Research - Introduction to reproducible research using version control

Objectives of this course

We explain the basics of version control using git and show how it can help both individual and collaborative research.

Target audience

Any PhD students, post-docs, researchers of UNIL and CHUV who have to deal with code development and/or collaborative papers/documents edition.

Content

- What is version control and why is it a good thing?
- What is git?
- Git basics for individual work
- Collaborative working using git

Length

1 half-day

Organization

On a quarterly basis

Location

To be defined or remotely

IMPORTANT: Please register using your UNIL email address!
