

# Validate news or events

Users with write permissions in a channel have access to the validation of the different objects in their channel. Each news / event is assigned a status. Here is the list of existing statuses in the new system NewsUNIL:

- **To validate:** Default status, the news is awaiting publication and does not appear in the websites.
- **Proposed:** Status of an object proposed by another channel, or submitted by a person who does not have write rights in the channel
- **Online:** Status after publication, appears on the various services (websites, public research, L'ACTU, L'AGENDA)
- **Offline:** Status applies after the end of publication date for news. For events, the date of the event is applied.

## Validation of a news

The screenshot displays the NewsUNIL validation interface. At the top, there are navigation elements: 'Actualités 66', a notification bell with '1', and 'Annonces 23'. Below this is a search bar with 'Mes validations' selected in the dropdown and 'Recherche libre...' in the input field. A 'Recherche avancée' link is visible below the search bar. The main content area shows a list of news items with columns for 'Visuel', 'Titre', 'Site web', 'Publié le', and 'Visibilité'. The third item, 'CMS Jahia: maintenance du 11.12.2025 TEST', has a status of 'TO ENABLE' and an 'Edit' button highlighted with a red box and the number 4. The interface also includes pagination controls and a 'Relayed in' section at the bottom left.

1. A pellet indicates the number of items awaiting validation
2. In the predefined lists, choose the menu "My validations"
3. Status of item: TO VALIDATE or PROPOSED
4. Show details to access the validation. Click the "Edit" button and choose the "View / Publish"
