Give access to DCSR NAS files to an external collaborator

There are two administrative steps:

1. The external collaborator must ask a UNIL account following the instructions on this webpage (go to "demander un compte informatique"). Warning: in the online form, the external collaborator have to write the name/email of the PI who is sponsoring the UNIL account in the comments section.
2. the PI (Principal Investigator) to whom the external collaborator is related must use this application to add the collaborator into the appropriate project. Log into the application if necessary on the top right, and click on the "Manage members list / Gérer la liste de membres" icon for your project. The usernames always have 8 characters (e.g. Greta Thunberg username would be: gthunber)

The external collaborator can then access the data of the project stored on the UNIL NAS using VPN:

- Install and use the UNIL VPN
- Access the NAS from a laptop
